Subject: Guidelines and Academic Clarifications for Minor Specialization (MS) Mini-Project

Applicable to: B.Tech (EEE/ECE/Mechanical/Mechatronics/Biomedical/Civil/chemical/Bio-Tech/Aeronautical/Automobile/Industrial/Cyber Physical Systems/Electronics & Instrumentation) Programs

Dear Students,

This is to inform all B.Tech students from above mentioned programs have option to choose Minor Specialization (MS) in select domains. The Minor Specialization is optional and intended for students who wish to gain focused domain expertise. Students opting for a Minor Specialization are advised to carefully note the following guidelines and clarifications, particularly with respect to the Minor Specialization Mini-Project.

1. Mini-Project (Mandatory Component)

For the award of Minor Specialization, carrying out Mini-Project is a mandatory academic requirement for students pursuing a Minor Specialization.

The mini-project is to be carried out across the 6th and 7th semesters and will be evaluated for a total of 100 marks. Students must work in teams of 3–4 members, all belonging to the same Minor Specialization basket. The outcome and evaluation of the mini-project will directly impact the student's CGPA. Therefore, students are expected to treat the mini-project as a serious academic activity, ensuring quality work, originality, and sustained effort throughout the project duration. The project should be of significant good quality.

2. Important Academic Clarifications

Students must clearly understand that:

The Minor Specialization Mini-Project is not equivalent to the award of a minor degree.

It is a guided academic mini-project, aligned with the learning objectives of the selected minor basket and governed by departmental guidelines.

3. Program Electives and Minor Specialization Rules

Once enrolled in a Minor Specialization, all program electives must be chosen from the same minor basket.

4. Dropping Minor Specialization – Semester-wise Implications

Students who choose to drop the Minor Specialization in the current semester (6th semester):

May continue with the program electives already registered in the 6th semester.

Must note that in the 7th semester, they will be allotted program electives by the Academic Section, though students can give their choice of program electives. No mini-project components will be not applicable

Students dropping the Minor Specialization at any stage must:

Inform the Minor Specialization Project Coordinator, Minor Specialization Mentor, and Team Members through email.

5. Internship and Minor Specialization

Students opting for a one-year company internship (7th and 8th semesters):

Minors offered through Coursera: May continue the Minor Specialization provided they complete the Coursera requirements and manage both responsibilities responsibly.

All other Minors: Must drop the Minor Specialization and take department-assigned NPTEL electives (in coordination with the Department NPTEL Coordinator).

6. Failure in Minor Specialization Subjects

Failure in a Minor Specialization subject does not affect the mini-project evaluation.

However, students must clear failed subjects through makeup examinations to complete academic requirements.

7. Advisory to Students

Students are strongly advised to make an informed and well-considered decision regarding continuation or withdrawal from the Minor Specialization, keeping in mind:

Academic rigor
Time commitment
CGPA impact
Long-term academic planning

Minor Specialization Courses offered from SCE dept. are(Main Basket name):

1. Coursera Minor Specialization in Data Science
2. Coursera Minor Specialization in Fundamentals of Computing

Mini-Project Group Formation Guidelines (Mandatory)

- Students pursuing a **Minor Specialization must form mini-project groups consisting of a minimum of three (3) and a maximum of four (4) members**.
- **All members of a group must belong to the same Minor Specialization basket.** Formation of groups across different minor baskets is **strictly not permitted**.
- **Group formation is entirely the responsibility of the students.** Students must ensure that all members are enrolled in the **same minor specialization**.
- **One member from each group must submit the group details through the form (find the link below)**
- Minor Specialization Details Collection Form-Non-SCE Students – Fill out form

- While submitting the form, students must **clearly and correctly mention**:
  - Program Elective (PE) name
  - Subject code
  - Minor Specialization basket name
- **Incomplete, incorrect, or insufficient information will not be entertained**, and such submissions will be **discarded without further consideration**.
- Students who have **already carried out a project related to their minor specialization under a faculty member** and wish to **extend the same work as their Minor Specialization Mini-Project** may indicate the **faculty name** in the form. Assignment of the same faculty as mentor will be **subject to feasibility and departmental approval**.
- **Once the group details are submitted and received, no changes will be permitted under any circumstances.** Students are therefore advised to exercise **utmost care while forming groups and submitting details**.
- Groups formed with **incorrect combinations** (such as members from different minor baskets) or with **invalid/incomplete data** will be **rejected outright**.
- **10th February 2026 is the last and final date for mini-project group formation.** No requests for extension or modification will be considered beyond this date.

Minor Specialization Mini-Project – Evaluation Timeline

Phase	Activity	Timeline	Expected Outcome / Deliverable
Phase 1	**Synopsis Submission & Approval**	**1st week of March 2026**	Problem statement, objectives, scope, team details
Phase 2	**Literature Review & Research Gap Identification**	**By end of April 2026**	Review of existing work, identified research gaps, finalized problem formulation

Phase	Activity	Timeline	Expected Outcome / Deliverable
Phase 3	**Methodology Design**	**May, 2026**	Proposed methodology, system architecture, algorithms/models to be used
Phase 4	**Implementation Phase**	**June – July, 2026**	Module-wise implementation, coding, experimentation, intermediate results
Phase 5	**Results & Analysis**	**August, 2026**	Result analysis, performance evaluation, graphs, observations
Phase 6	**First Round of Evaluation**	**September, 2026 – 1st round**	Interim evaluation based on implementation, results, and progress
Phase 7	**Final Evaluation & Demonstration**	**1st week of November, 2026 , Final evaluation**	Final report, presentation, demonstration, viva-voce

For any clarification, please reach out to your Minor Specilaization Project Coordinator, or Minor Spcialization mentor, Departmental NPTEL Coordinator.
